

SMART SYSTEM FOR AUTOMATING THE OPERATION OF CONTAINER TERMINALS

Full control over container management: from reception and storage to service and delivery - for terminals and logistics companies. In a single web interface.

A CONTAINER TERMINAL IS A COMPLEX MECHANISM

When processes are carried out in Excel, by email, mail and walkie-talkies - speed, control and money are lost

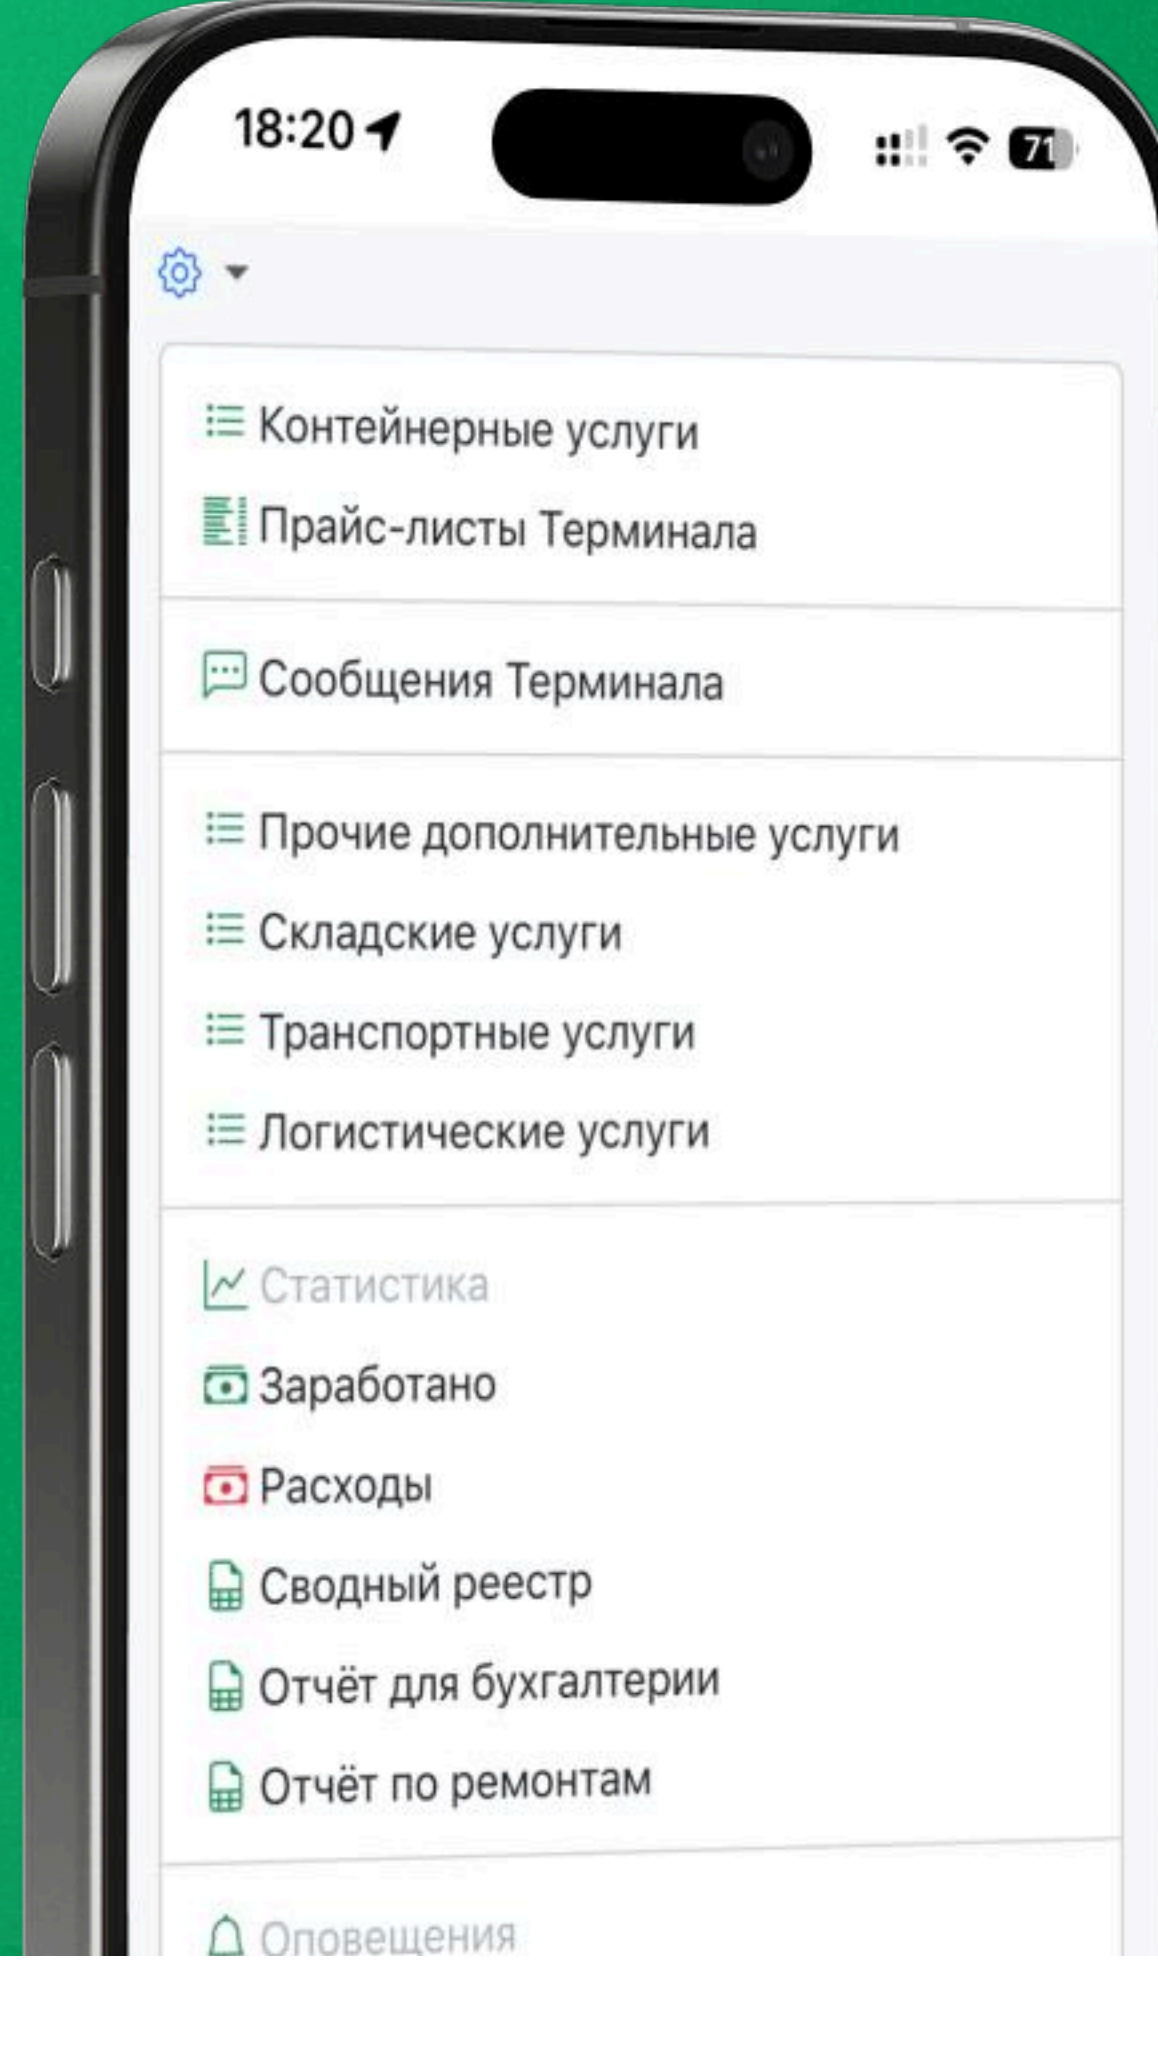

PROBLEM

- Up to 25% of time is spent on manual input and reconciliation
- There is no unified system of interaction with clients
- Financial flows are scattered across tables
- Accounting errors lead to disputes and losses

SOLUTION USING

ICONDIS is a web platform that integrates all terminal and client processes in one system

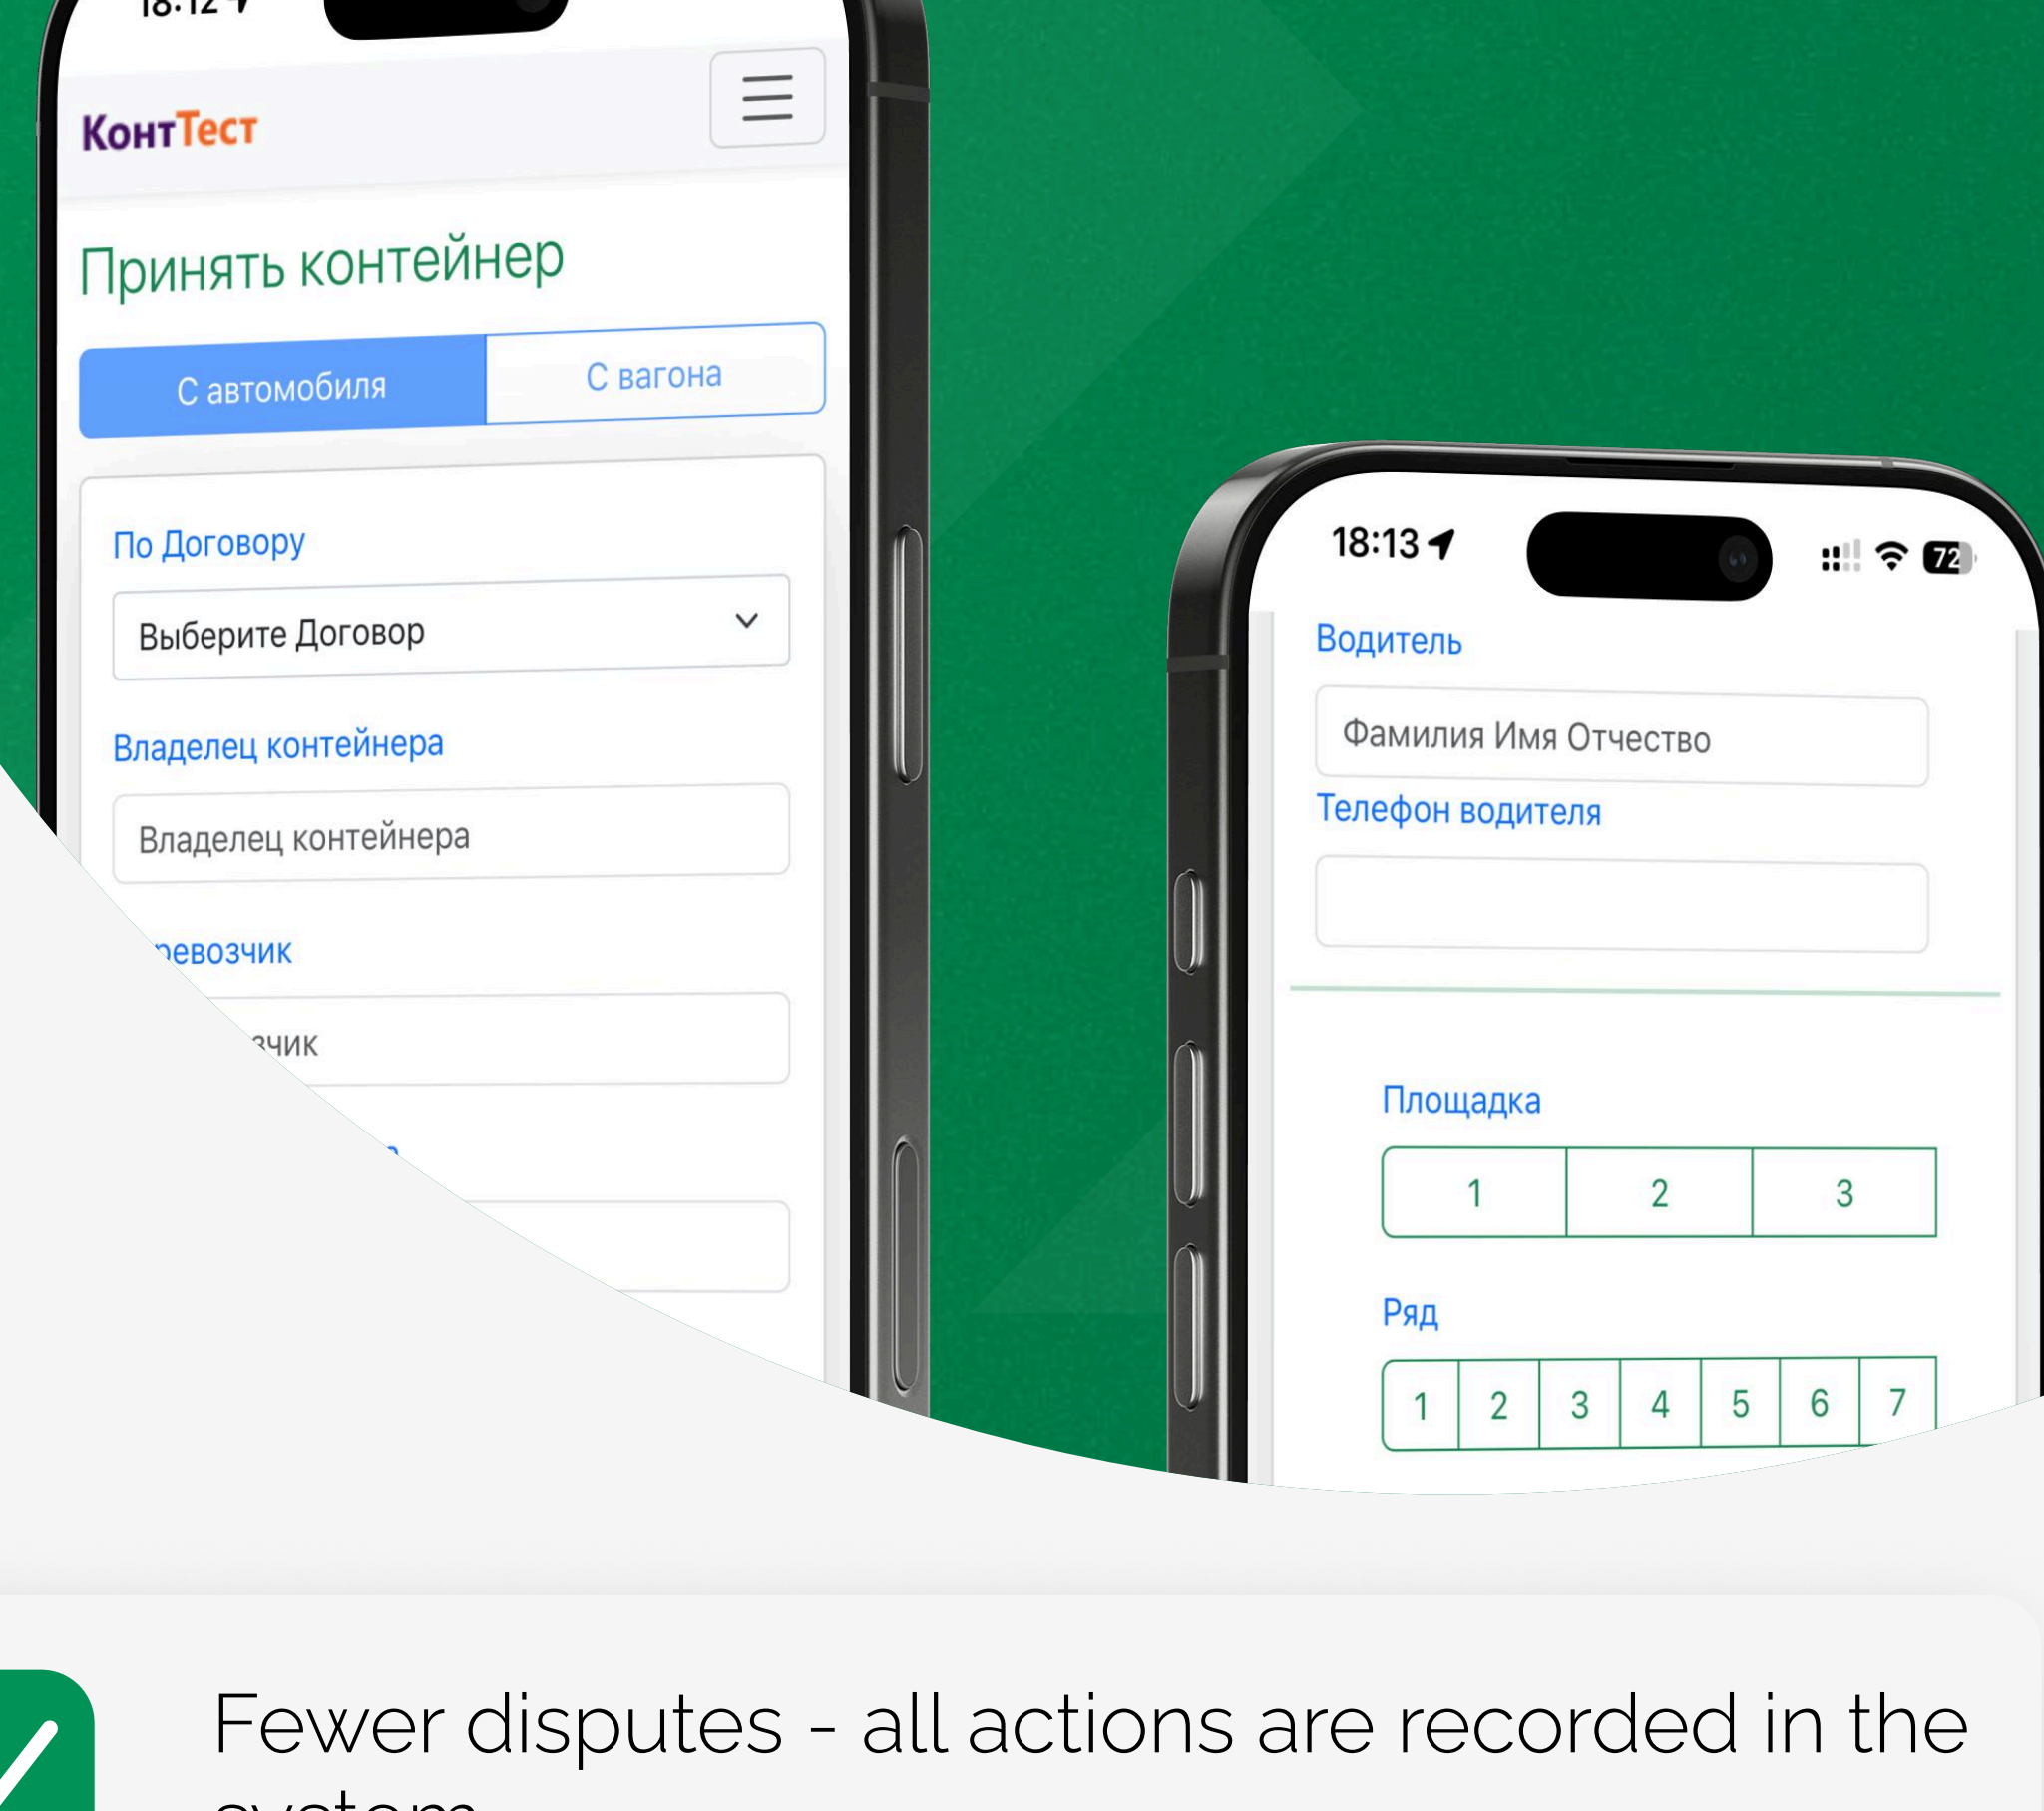

- Online applications for receiving and issuing containers from clients, including a system for ordering services for them
- Accounting for containers, including their stuffing and unstuffing, as well as transport and storage services and repair of damage
- Automatic calculation of consolidated financial registers: takes into account the cost of storing containers, Cargo Handling, repairs and additional services - according to the established price lists of the terminal or the agreed price with the client
- Information about all processes is available to terminals and their clients in real time - on a phone, tablet or computer

BENEFITS

ICONDIS is a web platform that integrates all terminal and client processes in one system

- Container acceptance is accelerated by 30-40%
- Manual input errors are reduced to a minimum
- There are many times fewer lost containers: forgotten containers, controversial positions, "where is it?" - remain in the past
- Transceivers work directly on site with a convenient interface on the phone
- Fewer disputes - all actions are recorded in the system
- Financial transparency for each client and each container

WHO IS ICONDIS FOR?

- FOR TERMINALS**
accounting, control, finance
- FOR THE DIRECTOR**
analytics, transparency, income/expense control
- FOR TRANSCIVERS**
fast mobile work
- FOR REPAIRMEN**
setting repair tasks, container status, request history - all in one window
- FOR CRANE OPERATORS**
access tasks and priorities directly from your tablet or smartphone - without confusion and calls

FOR LOGISTICS COMPANIES THAT ARE CLIENTS OF THE TERMINAL
applications, approvals, status of containers at the terminal in real time

RELIABILITY AND VERSATILITY

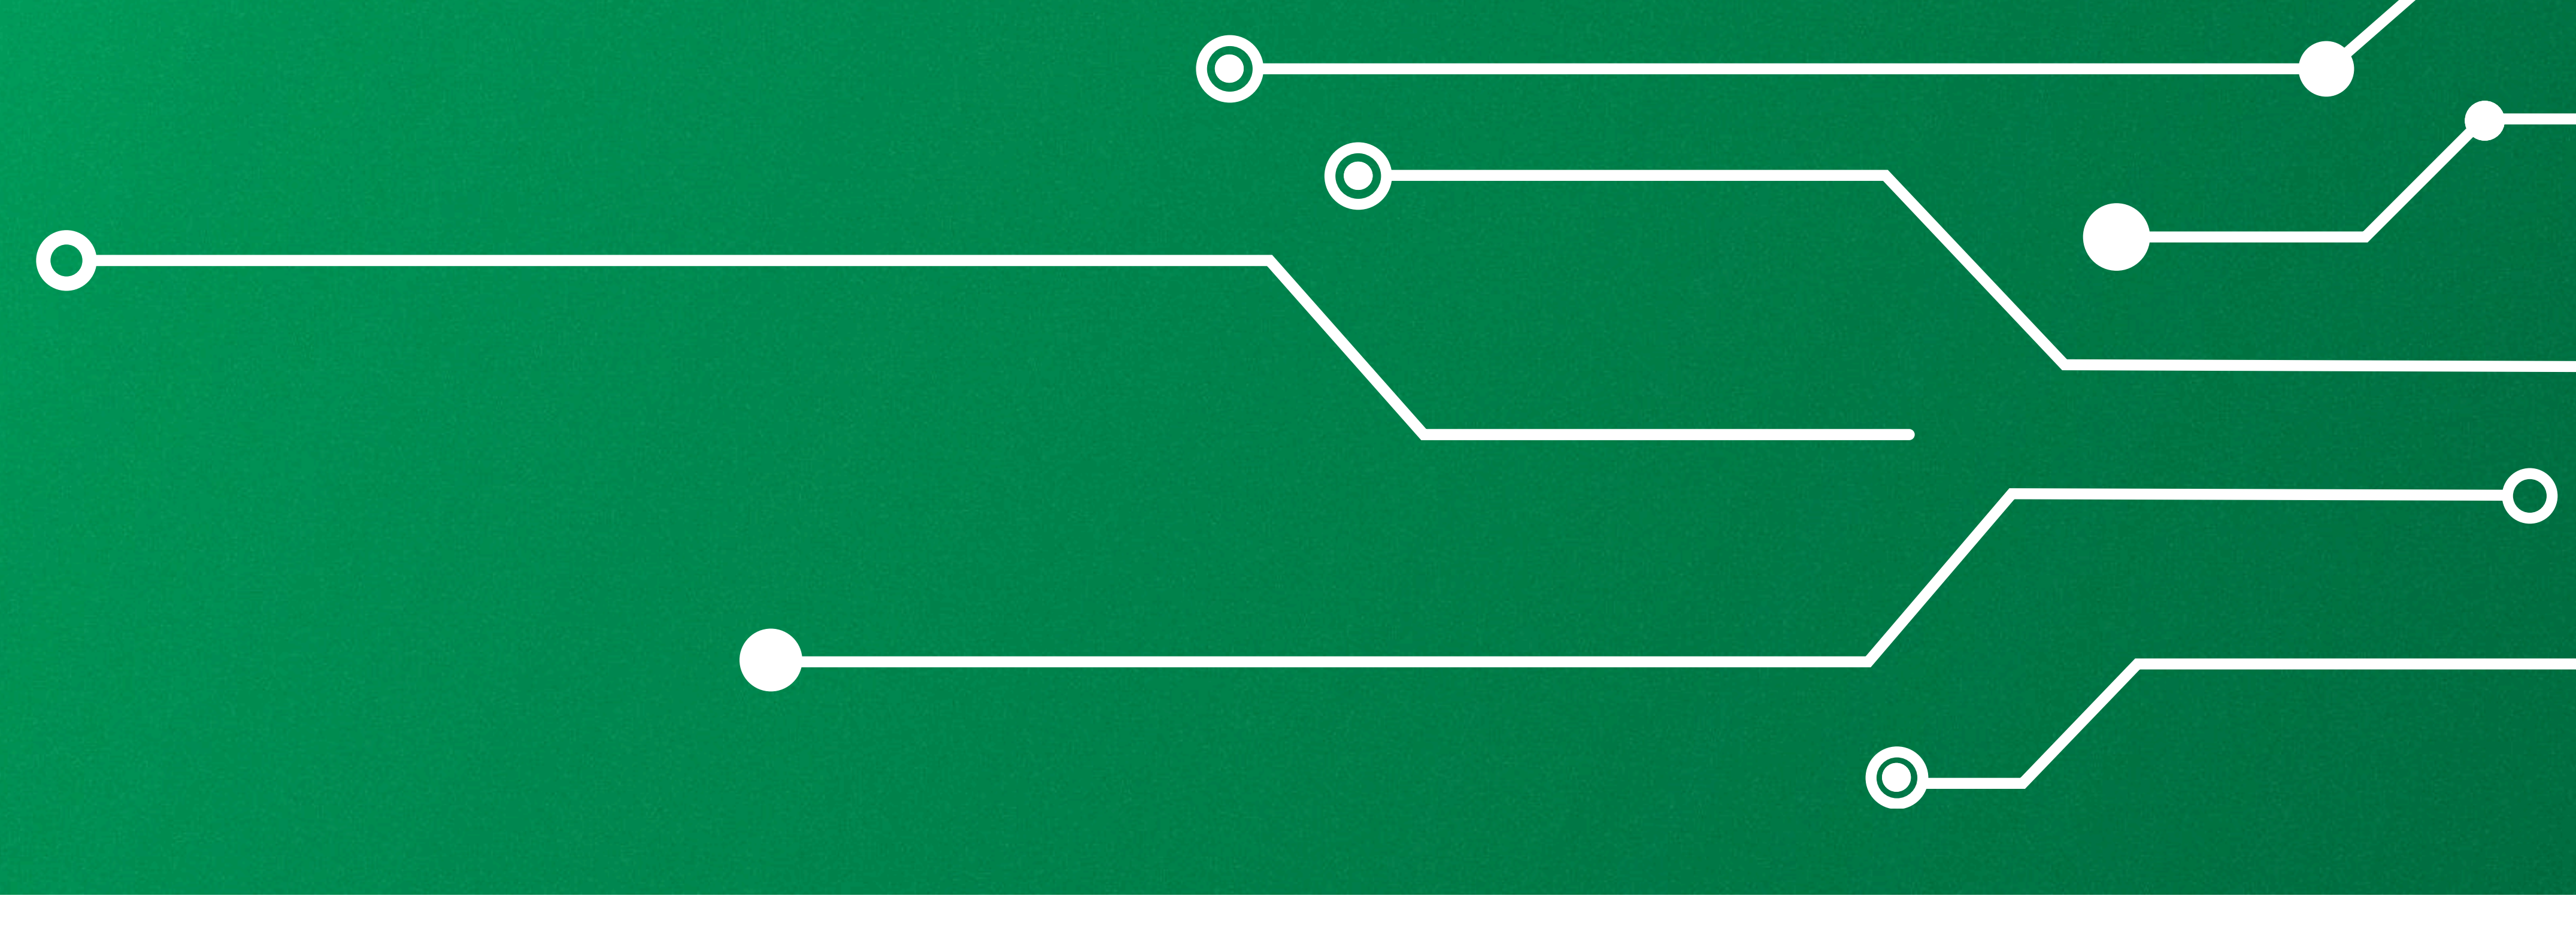

ICONDIS is actively used by dozens of terminals and logistics companies in Russia, as well as in India and China, including large companies with revenues of more than 20 billion rubles

- A universal system designed taking into account different terminal formats - allows easy implementation on any terminal
- Comprehensive EDI support for large logistics companies
- Automatic verification of container numbers by check digit upon receipt allows you to avoid manual entry errors
- Active refinement based on real experience and customer feedback

THE AI MODULE IS ALREADY ON ITS WAY

Recognition of all information from photos of container doors will eliminate manual input and errors - completely digital reception in a matter of seconds

A DIGITAL SYSTEM THAT UNDERSTANDS THE CONTAINER BUSINESS

ICONDIS is a web platform that integrates all terminal and client processes in one system
